

EP MEASURE SELECTION MATRIX

Company Name: _____

Date: _____

Time: _____

Responsible Analyst: _____ #

Instructions: Organize and categorize the measures according to five levels of risk: Low, Cautious, Elevated, High, and Severe. Each column represents a level of risk, and each row organizes the measure options into various categories, such as Preparedness, Prevention, Passive Protection, Active Protection, and Response.

	Green	Blue	Yellow	Orange	Red
Categories / Elements	Low Risk Level Profile	Guarded Risk Level Profile	Elevated Risk Level Profile	High Risk Level Profile	Severe Risk Level Profile
Preparation Measures	None	Updated organizational risk assessment annually	Updated risk assessment by profile annually	Updated individual risk assessment annually	Continuous individual assessment of threats, vulnerabilities, and risks (AVR)
Preventive Measures	No additional preventive measures required beyond the existing physical security system	Document guide on self-protection fundamentals	Briefing on self-protection against assaults and kidnappings	Executive protection risk management training with the protection team	Specific, tailored training based on AVR results

	at the workplace				
		Document guide on transportation security	Briefing on vehicle safety	Defensive, evasive, anti-kidnapping driving course with the protection team	
		Document guide on first aid and fire prevention	Briefing on first aid, fire prevention, and control	Specific first aid training, including bleeding control, CPR, etc., with the protection team	
		Document guide on existing emergency plans and emergency contact directory, including public security forces	Briefing on emergency management and contact with public forces	Emergency management training with the protection team	
		Document guide on establishing contact with neighbors and community	Training on basic security communication protocols	Comprehensive security communication and coordination course with the protection team	
		Document guide on implementing a personal video surveillance system	Briefing on the importance of hiring commercial video surveillance systems for residence		
		Bulletin on threat and vulnerability levels in the context	Preventive intelligence bulletin with information, advice, and updates	Counter-surveillance	

			Preparation for travel emergencies	Continuous communication while traveling	
				RESIDENCE INSPECTION	
			Daily route review and optimization	VEHICLE AND ROUTE INSPECTION	
		Access to helpdesk for cybersecurity incident management	Basic cybersecurity advice		
				Training in handling kidnapping situations	Continuous review and update of security protocols according to AVR
		Establishment of safe zones at home	Verification of travel route security	Use of advanced technology for real-time monitoring	Joint exercises with security forces and international response according to AVR
				Continuous analysis of the environment and threats to adjust measures	Use of big data analysis to predict and prevent emerging threats according to AVR
			Implementation of electronic locks and controlled access systems	Continuous supervision by a specialized GSOC	Continuous proactive monitoring of potential and emerging threats

		Basic access supervision	Installation of physical barriers at key points	Real-time supervision of all executive activities	Establishment of a controlled security perimeter
		Access supervision at specific events	Strengthening of physical security at the residence	Assignment of monitoring and intruder detection equipment	Implementation of artificial intelligence technology for threat prevention
		Training in the use of basic security equipment	Monitoring of suspicious activities in the environment	Continuous supervision of personal and professional communications	Full integration of security and monitoring systems in all executive activities
		Personal cybersecurity supervision	Implementation of tracking systems in vehicles	Real-time access supervision in all facilities	Coordination with intelligence agencies to identify potential threats
		Occasional social media supervision	Access supervision at high-profile events	Implementation of biometric identification systems for access	Coordination with intelligence agencies to identify potential threats
		General security alerts	Advanced security alarms at the residence	Use of armored vehicles	Real-time adapted contingency plans according to AVR
		Occasional residence and office supervision	Review and improvement of locks on doors and windows	Armed escort for all activities outside office or residence	Continuous monitoring of potential global and local threats according to AVR
		Provision of basic self-defense equipment	Installation of a video surveillance camera system	Installation of remote-locking systems in vehicles	Continuous review of security vulnerabilities according to AVR

		Regular contact with law enforcement	Training in the use of alarms and security systems	Implementation of controlled access system for residence and office	Advanced planning for alternative routes and evacuations according to AVR
		Periodic communication on security status	Supervision of personal and business digital security	Constant monitoring by a dedicated GSOC	Establishment of safe havens and strategic escape routes according to AVR
		Background checks for service personnel	Supervision of personal and professional communications	Real-time supervision of executive operations	Use of technology to protect against targeted cyberattacks according to AVR
		Supervision of specific security events	Detection of potential threats on social media and media	Establishment of routine change procedures to avoid predictability	Planning and execution of counter-surveillance and counterintelligence operations according to AVR
		Supervision of the immediate environment around the residence	Specific travel risk analysis	Use of advanced technology for perimeter protection	Direct coordination with security agencies and international organizations according to AVR
		Basic first aid training	Review and improvement of vehicle security	Assignment of a personal protection team	Constant evaluation and adjustment of implemented security measures based on emerging threats according to AVR
		Basic security supervision at specific events	High-profile event security supervision	Assignment of armed escort	Establishment of a controlled and monitored security perimeter according to AVR
		Access supervision at residence and office	Installation of bulletproof glass in office and residence	Constant supervision of perimeter security	Complete reinforcement of physical security in all spaces frequented by the executive according to AVR
		Background checks for service personnel	Access supervision at high-profile events	Continuous supervision and analysis of residence security	Integration of advanced monitoring technology in all executive activities according to AVR

		Supervision of the area around office and residence	Reinforcement of locks and controlled access	Installation of advanced perimeter surveillance systems	Implementation of advanced monitoring and threat analysis technology according to AVR
		Basic vehicle security supervision	Implementation of tracking systems in vehicles	Implementation of advanced ballistic protection vehicles	Assignment of an exclusive protection team for critical operations according to AVR
Passive Protection Measures	Physical security measures already installed in the organization	Basic security supervision	Installation of reinforced doors at the residence	Use of advanced ballistic protection vehicles	Creation of a safe room in the residence according to AVR
		Basic cybersecurity advice	Supervision of personal and business digital security	Continuous supervision of cyber threats	Implementation of advanced technology for protection against targeted cyberattacks according to AVR
		Occasional social media monitoring	Supervision of personal and professional communications	Real-time supervision of all communications	Coordination with cyber intelligence agencies according to AVR
		Basic communication supervision	Supervision of network and device access	Advanced supervision and protection of corporate networks	Real-time integration of cybersecurity systems for threat prevention according to AVR
		Basic personal cybersecurity monitoring	Personal advice for improving digital security	Continuous monitoring of social media and media threats	Use of artificial intelligence for proactive cyber threat detection according to AVR
			Installation of security film on windows	Use of armored vehicles	Creation of a safe room in the residence according to AVR
				Bulletproof vest	Provision of a bulletproof vest according to AVR
		Occasional residence and office supervision	Installation of bulletproof glass in office and residence	Installation of advanced perimeter surveillance systems	Use of biometric and restricted access monitoring systems

		Monitoring of external communications	Installation of alarm systems with direct connection to security forces	Structural reinforcement of the residence	Complete reinforcement of physical security in all areas frequented by the executive
				Detailed emergency, evacuation, and safe route plans	Coordination with rapid response teams and local security forces according to AVR
				Implementation of encrypted communication systems	Creation of a mobile command center for critical operations according to AVR
				Implementation of proprietary video surveillance systems in residence	Integration of artificial intelligence for real-time threat assessment according to AVR
Active Protection Measures	None	Basic security supervision at events	Assignment of a security team for critical trips	Assignment of an armed protection team for all activities outside residence	Assignment of an exclusive protection team for critical operations
		Occasional supervision of travel routes	Real-time communication supervision during travel	Use of armored vehicles for transfers	Establishment of a rapid response team at the residence and office
		Assignment of a local emergency contact	Real-time activity monitoring during high-profile events	Implementation of advanced monitoring systems at the residence and office	Coordination with local and international security forces
		Personal communications supervision in crisis situations	Continuous perimeter security supervision	Assignment of a 24/7 surveillance team	Planning and execution of counter-surveillance and counterintelligence operations

		Occasional supervision of social media in security contexts	Monitoring of suspicious financial transactions	Implementation of advanced access control technology	Real-time supervision of all executive activities and communications
		Residence and office supervision in emergency situations	Assignment of a protection officer for high-profile events	Continuous supervision and analysis of residence security	Implementation of advanced security and protection systems in all executive activities
		Occasional supervision of travel routes and executive activities	Real-time security monitoring at the residence and office	Assignment of a 24/7 protection team	Full integration of security and monitoring systems in all executive activities
		Basic supervision of executive activities in critical situations	Communication monitoring during travel	Implementation of advanced monitoring technology for the residence and office	Establishment of a controlled and monitored security perimeter
		Basic travel route security supervision	Assignment of a security team for critical trips	Assignment of a security-trained driver	Establishment of a rapid response team at the residence and office
		Basic security supervision in critical activities	Real-time monitoring of activities during high-profile events	Assignment of a personal protection team	Coordination with local and international security forces
		Basic travel route supervision	Real-time communication supervision during travel	Implementation of advanced monitoring systems at the residence and office	Planning and execution of counter-surveillance and counterintelligence operations
		Basic emergency communication monitoring	Residence and office security supervision	Real-time supervision of all executive activities	Continuous monitoring of executive operations in real-time
				Advance vehicle / escort	
		Route		Driver assigned to transport the protectee	
Response Measures	General emergency plan already implemented	Recourse to public security forces	Remote response from a GSOC	Immediate response from the protection team in any situation	Coordinated response with local security forces and international organizations

	in the organization				
		Emergency contact with security forces	Activation of an emergency response protocol during travel	Assignment of an exclusive protection team for critical operations	Establishment of a mobile command center for response coordination
		Activation of a basic response protocol	Real-time supervision and activation of emergency resources	Assignment of a 24/7 surveillance and protection team	Coordination with local and international security forces for response
		Basic supervision of communications in critical situations	Real-time supervision and activation of emergency resources	Continuous supervision and analysis of executive communications and activities	Real-time response and supervision for any potential threat
		Occasional security supervision of the residence and office	Real-time supervision and activation of emergency resources	Implementation of advanced monitoring and analysis systems at the residence and office	Implementation of advanced monitoring and analysis systems for threat prevention
		Basic residence and office security supervision	Real-time supervision and activation of emergency resources	Implementation of advanced security systems at the residence and office	Continuous real-time analysis of the security situation
		Supervision of communications and activities in crisis situations	Real-time supervision and activation of emergency resources	Continuous supervision and analysis of executive communications and activities	Establishment of a mobile command center for response coordination
		Basic residence and office security supervision	Real-time supervision and activation of emergency resources	Continuous supervision and analysis of executive communications and activities	Establishment of a mobile command center for response coordination

		Occasional security supervision of the residence and office	Real-time supervision and activation of emergency resources	Continuous supervision and analysis of executive communications and activities	Continuous real-time analysis of the security situation
		Basic supervision of communications and activities in critical situation	Real-time supervision and activation of emergency resources	Continuous supervision and analysis of executive communications and activities	Establishment of a mobile command center for response coordination
		Contact with local police in case of emergency	Remote assistance from a GSOC during travel	Coordination with local security forces and emergency services	Integration of a highly trained and specialized security team for rapid responses
		Provision of basic information on first aid	Real-time security situation supervision and analysis	Implementation of rapid response systems in case of emergency	Coordination and joint training with local special forces
		Access supervision at high-profile events	Assistance in coordinating evacuation in case of threats	Assignment of a personal protection team with advanced response capabilities	Establishment of a dedicated emergency operations center exclusively for the executive
		Supervision and access control at the office	Immediate response to minor security incidents	Coordination with intelligence agencies for ongoing risk assessment	Planning and simulation of responses to terrorist threats and kidnappings
		Supervision of communications in risk situations	Activation of specific emergency protocols for the executive	Implementation of contingency plans adapted to high-threat scenarios	Direct coordination with emergency response and international evacuation units
		Basic residence security supervision	Assistance with activation of remote response teams in case of emergency	Proactive response to potential threats before they occur	Creation of real-time evacuation and contingency plans based on the emerging situation

		Occasional supervision of travel routes	Supervision and analysis of specific threats during high-profile events	Implementation of immediate monitoring and response systems at the residence and office	Integration with multinational response teams for executive protection and evacuation
		Contact with local emergency services	Real-time response and monitoring of all security systems	Assignment of a specialized security team for advanced protection	Continuous coordination and supervision of all executive operations in real-time
		Basic security supervision at events	Response to security incidents using internal organization resources	Implementation of advanced monitoring and analysis systems for immediate response	Monitoring and supervision of global threats with real-time updates
		Basic emergency communication supervision	Activation of a remote response team from the GSOC	Implementation of advanced rapid response technology in case of emergencies	Establishment of a coordination protocol with global rapid response units
		Recourse to public security forces	Remote response from a GSOC	Immediate response from the protection team in any situation	Coordinated response with local security forces and international organizations
		Emergency Contact with Security Forces	Activation of an emergency response protocol during travel	Implementation of contingency plans adapted to high-threat scenarios	Establishment of a mobile command center for response coordination
		Basic Security Supervision in Crisis Situations	Real-time supervision and activation of emergency resources	Coordination with intelligence agencies for ongoing risk assessment	Coordination with emergency response and international evacuation units
		Occasional Security Supervision of the Residence and Office	Supervision and analysis of specific threats during high-profile events	Assignment of a specialized security team for advanced protection	Creation of real-time evacuation and contingency plans based on the emerging situation

		Basic Security Supervision at Specific Events	Response to security incidents using internal organization resources	Implementation of advanced rapid response technology in case of emergencies	Integration of real-time monitoring systems for global threat prevention
		Basic Emergency Communication Supervision	Activation of a remote response team from the GSOC	Direct coordination with rapid response teams and security forces	Establishment of a coordination protocol with global rapid response units
